EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science

Expected 2028

- Relevant Coursework: Intro Discrete Math CS, Computer Organization and Programming, Computer Networking I, Intro to Software Engineering, Linear Algebra, Multivariable Calculus, Differential Equations, Business Analytics

TECHNICAL SKILLS

Languages: C++, C#, Swift, Java, Python, HTML, CSS, JavaScript, TypeScript

Frameworks: React.js, React Native, SwiftUI, Node.js, Next.js, Expo, SQLite, Firebase, Supabase

Developer Tools: Git, Xcode, VS Code, Google Cloud Platform, Plaid, Claude Code, Codex

EXPERIENCE

Co-Founder and CTO

Jun 2026 – Present

GetPaid | TypeScript, React.js, React Native, Expo, Firebase, Google Cloud Platform

Remote

- Surpassed \$100K in revenue, 20K monthly active users, and a #150 U.S. App Store Finance ranking in under 60d
- Co-founded a fintech app helping consumers discover and claim class-action settlements and unclaimed property
- Architected the app's cross-platform attribution pipeline into a single source of truth across iOS, Android, & Web
- Built an automated subscription-cancellation engine on Plaid's Recurring Transactions API, combining exact- and fuzzy-matching logic to help consumers identify and cancel unwanted charges and subscriptions across providers

Software Engineer Intern

Apr 2026 – May 2026

10x | Python, Qt, Linux

New York, NY

- Contributed to Core OS, an AI-native linux operating system built with Qt for Python/PySide6 & Ubuntu Server
- Architected an agent-native notification framework with SQLite persistence, actionable agent flows, hotkeys, and DND preference toggles, with unified action dispatching across scheduler and AI agent systems within the OS
- Built a menu system, file/folder attachment pipeline, and notification action deep linking for AI agent workflows

Software Engineer Intern

Jan 2026 – Feb 2026

Nolla Health | Swift, SwiftUI

New York, NY

- Collaborated in a cross-company initiative to integrate Derm AI's core app features into the Nolla Skin iOS app
- Designed in-app scanning streaks and a native home screen widget to help boost daily user engagement and usage
- Implemented an accomplishment feature to track treatment adherence, skin improvement, and streak maintenance

PROJECTS

Autograd Engine | C++, CMake, Catch2

Aug 2026 – Present

- Building reverse-mode automatic differentiation engine, gradient computation-graph mechanism of ML frameworks
- Mechanisms such as operator-overloaded graph construction, topological sort, and reverse gradient propagation
- Implemented unit tests for forward and backward passes using Catch2 with self-referential and multi-path cases

DevBrain | TypeScript, OpenClaw, Next.js, Firebase, Google Cloud Platform

Jun 2026 – Jul 2026

- Co-founded DevBrain at ClawComp, a Link Ventures hackathon, placing 2nd for AI agent orchestration platform
- Architected a shared context layer, adjacent to a RAG agent memory system, exposed through OpenClaw plugin

Derm AI | JavaScript, React Native, Expo, Firebase, Google Cloud Platform

Jun 2025 – Jun 2026

- Co-founder and CTO of Derm AI, an iOS app for AI-powered skin progress tracking and product recommendations
- Scaled the app and AI pipeline to over 1,000 users and 2,000 completed scans, validating the model integration
- Designed prompt-engineered pipelines combining OpenAI's API with Google Cloud Vision to analyze skin images
- Built structured prompt templates and profile-conditioned inputs to ground model outputs in user medical history

SpareLot | JavaScript, React.js, Node.js, Firebase, Stripe, Google Cloud Platform

Jun 2024 – Jun 2025

- Co-founder and CTO of SpareLot, a platform for sellers to rent out their underutilized storage spaces to buyers
- Implemented Firebase, Google Cloud Functions, and Stripe to handle secure user data, listings, and transactions
