EDUCATION

Georgia Institute of Technology, Atlanta, Georgia

Expected 2028

Bachelor of Science in Computer Science, Threads: Intelligence and Modeling-Simulation

Relevant Coursework: Intro Discrete Math CS, Computer Organization and Programming, Computer Networking I, Intro to Software Engineering, Linear Algebra, Multivariable Calculus, Differential Equations, Business Analytics

TECHNICAL SKILLS

Languages & Frameworks – C++, C#, Swift, SwiftUI, Java, Python, HTML, CSS, JavaScript, TypeScript, React, React Native

Databases & Tools – SQLite, Firebase, Supabase, Git, Xcode, VS Code, Google Cloud Platform, Plaid, Expo

ML/AI – Google Cloud Vision, Prompt Engineering, LLM Integration, AI Agent Orchestration, Agentic Workflows, Claude, Codex

WORK EXPERIENCE

Red Rock Tech, LLC – *Co-Founder and CTO*

Jun 2026 – Present

- Co-founded a fintech app helping consumers discover and claim class-action settlements and unclaimed property
- Architected the app's cross-platform attribution pipeline into a single source of truth across iOS, Android, and Web platforms
- Built an automated subscription-cancellation engine on Plaid's Recurring Transactions API, combining exact- and fuzzy-matching logic to help consumers identify and cancel unwanted charges and subscriptions across their providers and banks
- Surpassed \$100K in revenue, 20K monthly active users, and a #150 U.S. App Store Finance ranking in under 60 days of launch

10x, New York, NY — *Software Engineer Intern*

Apr 2026 – May 2026

- Contributed to Core OS, an AI-native desktop operating system built with Python, Qt/PySide6, X11, and Linux Ubuntu Server
- Architected an agent-native notification framework: toast UI, notification center, SQLite persistence, actionable agent flows, hotkeys, and DND preference toggles, with unified action dispatching across scheduler and AI agent systems within the OS
- Built a focus-aware menu system, file/folder attachment pipeline, and notification deep-linking for AI-agent workflows

Nolla Health, New York, NY – *Software Engineer Intern*

Jan 2026 – Feb 2026

- Collaborated in a cross-company initiative to integrate Derm AI's core app features into the Nolla Acne iOS app
- Designed in-app scanning streaks and a native home screen widget to help boost daily user engagement and retention
- Implemented an Accomplishments feature to track treatment adherence, skin improvement, and streak maintenance

PROGRAMMING PROJECTS

Autograd Engine | C++, CMake, Catch2

Aug 2026 – Present

- Building reverse-mode automatic differentiation engine, the core gradient computation-graph mechanism of ML frameworks
- Includes mechanisms such as operator-overloaded graph construction, topological sort, and reverse gradient propagation
- Implemented unit tests for forward and backward passes using Catch2 with self-referential and multi-path composition cases
- Enforced memory safety with AddressSanitizer and UndefinedBehaviorSanitizer in a CI-integrated CMake pipeline in GitHub

DevBrain | TypeScript, OpenClaw, Next.js, Firebase, Google Cloud Platform

Jun 2026 – Jul 2026

- Co-founded DevBrain at ClawComp, a Link Ventures hackathon, placing 2nd overall for an AI agent orchestration platform
- Architected a shared context layer, adjacent to a RAG agent memory system, exposed through an OpenClaw AI agent plugin
- Presented with a live demo of calling an AI agent to implement a feature, after which it called back to report completion

Derm AI | JavaScript, React Native, Expo, Node.js, Firebase, Google Cloud Platform

Jun 2025 – Jun 2026

- Co-founder and CTO of Derm AI, an iOS app for AI-powered skin analysis, product recommendations, and progress tracking
- Designed prompt-engineered pipelines combining OpenAI's LLM API with Google Cloud Vision to analyze user skin images
- Built structured prompt templates and profile-conditioned inputs to ground model outputs in individual user medical history
- Scaled the app and AI pipeline to over 1,000 users and 2,000 completed scans, validating the model integration in production

SpareLot | HTML, CSS, JavaScript, React, Firebase, Stripe, Google Cloud Platform

Jun 2024 – Jun 2025

- Co-founder and CTO of SpareLot, a platform for sellers to rent out their underutilized storage spaces and buyers to rent them
- Implemented Firebase Auth, Firestore, Stripe, and Cloud Functions to handle secure user data, listings, and transactions

CERTIFICATIONS

Information Technology Specialist in Java: Certiport / Pearson VUE

Information Technology Specialist in Python: Certiport / Pearson VUE
